Annex I

CLASSIFICATION OF MANUFACTURING INDUSTRIES BASED ON TECHNOLOGY

Annex Table 1.1 presents manufacturing industries classified according to technology intensity using the ISIC Rev. 3 breakdown of activity.

Technological effort is a critical determinant of productivity growth and international competitiveness. However, since it is not spread evenly across the economy, analyses of industry performance and structural change attach much importance to technological criteria. Methodological work carried out at the OECD is used to determine these criteria.

In the past, a technology classification based on ISIC Rev. 2 industry classifications was widely used. The methodology uses three indicators of technology intensity reflecting, to different degrees, "technology-producer" and "technology-user" aspects: i) R&D expenditures divided by value added; ii) R&D expenditures divided by production; and iii) R&D expenditures plus technology embodied in intermediate and investment goods divided by production. These indicators were evaluated for 1990 and for the aggregate of the ten OECD countries for which a measure of embodied technology was available, using 1990 USD purchasing power parities (see T. Hatzichronoglou, "Revision of the High-Technology Sector and Product Classification", STI Working Paper 1997/2).

Following the adoption of ISIC Rev. 3 (NACE Rev. 1 in Europe) for collecting and presenting data on industrial activity both in national accounts (in the context of SNA93/ESA95) and industrial surveys, the 2001 Scoreboard used ISIC Rev. 3 R&D expenditure and output data to develop an updated technology classification based on an evaluation of R&D intensities for 13 OECD countries for the period 1991-97. In the absence of updated ISIC Rev. 3 input-output tables (required for estimating embodied technology), only the first two indicators could be calculated. This edition extends the analysis to cover the period 1991-99, although for only 12 OECD countries.

The division of manufacturing industries into high-technology, medium-high-technology, medium-low-technology and low-technology groups was made after ranking the industries according to their average over 1991-99 against aggregate OECD R&D intensities. Industries classified to higher categories have a higher average intensity for both indicators than industries in lower categories. Also considered were: i) temporal stability: for adjacent years, industries classified to higher categories have a higher average intensity than those in lower categories (see Annex Table 1.2); and ii) country median stability: industries classified to the higher categories have a higher median intensity than those in lower categories.

Points to note:

- This classification confirms that of the 2001 *Scoreboard* and also confirms the classification of "Medical, precision and optical instruments" (ISIC Rev. 3, Division 33) as a high-technology industry. This sector's R&D intensity continues to rise, and its inclusion complements the definition of the ICT sector (see *Measuring the Information Economy*, OECD, 2002) which includes some of its sub-divisions (notably 3312 and 3313).
- The cut-off points are clear except possibly the distinction between the medium-low- and low-technology groups.
- The low-technology group consists of relatively aggregate sectors, owing to limited detailed R&D expenditure data across countries. The few cases in which R&D intensities are available for more detailed (2-digit) breakdowns confirm the allocation of these industries to low technology.
- The classification concerns the OECD area as a whole. For individual countries, allocation to the technology groups may differ. Also, at national level, finer technology classifications may be generated from more detailed underlying data.

Annex 1.1. Classification of manufacturing industries based on technology¹

| ISIC Rev. 3 | 1999 | | | | 1991 | | | | |

Annex II

MAIN OECD DATABASES USED

Industrial structure and performance

STAN: The database for **Industrial Analysis** includes annual measures of output, labour input, investment and international trade which allow users to construct a wide range of indicators focused on areas such as productivity growth, competitiveness and general structural change. The industry list provides sufficient details to enable users to highlight high-technology sectors and is compatible with those used in related OECD databases. STAN is primarily based on member countries' annual National Accounts by activity tables and uses data from other sources, such as national industrial surveys/censuses, to estimate any missing detail. Since many of the data points in STAN are estimated, they do not represent the official member country submissions.

The latest version of STAN is based on the International Standard Industrial Classification (ISIC) Rev. 3 and has been expanded to cover all activities (including services) and a wider range of variables – it has effectively been merged with the OECD's International Sectoral Database (ISDB) which is no longer updated. Further details on STAN are available on the Internet at: www.oecd.org/sti/stan.

Publication: STAN is available on line on SourceOECD (www.sourceoecd.org). It is updated on a "rolling" basis (*i.e.* new tables are posted as soon as they are ready) rather than published as an annual "snapshot", in order to improve timeliness.

Science and technology

R&D and TBP: The **R&D** database contains the full results of the OECD surveys on **R&D expenditure and personnel** from the 1960s. The **TBP** database presents information on the **technology balance of payments**. These databases serve, *inter alia*, as the raw material for both the ANBERD and MSTI databases.

Publication: OECD (2003), *Basic Science and Technology Statistics: 2002 Edition*. Annual on CD-ROM (a printed edition is also available every two years).

MSTI: The **Main Science and Technology Indicators** database provides a selection of the most frequently used annual data on the scientific and technological performance of OECD member countries and seven non-member economies (China, Israel, Romania, Russian Federation, Singapore, Slovenia, Chinese Taipei). The indicators, expressed in the form of ratios, percentages, growth rates, cover resources devoted to R&D, patent families, technology balance of payments and international trade in highly R&D-intensive industries.

Publication: OECD (2003), *Main Science and Technology Indicators 2003/1*. Biannual. Also available on CD-ROM.

ANBERD: The **Analytical Business Enterprise Research and Development** database is an estimated database constructed with a view to creating a consistent data set that overcomes the problems of international comparability and time discontinuity associated with the official business enterprise R&D data provided to the OECD by its member countries. ANBERD contains R&D expenditures for the period 1987-2000, by industry (ISIC Rev. 3), for 19 OECD countries.

Publication: OECD (2002), *Research and Development Expenditure in Industry, 1987-2000*. Annual. Also available on diskette.

Patent database: This database contains patents filed at the largest national patent offices – European Patent Office (EPO); US Patent and Trademark Office (USPTO); Japanese Patent Office (JPO) – and other national or regional offices. Each patent is referenced by: patent numbers and dates (publication, application and priority); names and countries of residence of the applicants and of the inventors; and technological categories, using the national patent classification as well as the International Patent Classification (IPC). The compiled indicators mainly refer to single patent counts in a selected patent office, as well as counts of "triadic" patent families (patents filed at the EPO, the USPTO and the JPO to protect a single invention).

The series are published on a regular basis in OECD, *Main Science and Technology Indicators*.

Globalisation and international trade

AFA: The **Activities of Foreign Affiliates** database presents detailed data on the performance of foreign affiliates in the manufacturing industry of OECD countries (inward and outward investment). The data indicate the increasing importance of foreign affiliates in the economies of host countries, particularly in production, employment, value added, research and development, exports, wages and salaries. AFA contains 18 variables broken down by country of origin and by industrial sector (based on ISIC Rev. 3) for 18 OECD countries.

Publication: OECD, *Measuring Globalisation: The Role of Multinationals in OECD Economies*, 2001 Edition. Vol. I: Manufacturing. Biennial.

FATS: This database gives detailed data on the **activities of foreign affiliates** in the **services** sector of OECD countries (inward and outward investment). The data indicate the increasing importance of foreign affiliates in the economies of host countries and of affiliates of national firms implanted abroad. FATS contains five variables (production, employment, value added, imports and exports) broken down by country of origin (inward investments) or implantation (outward investments) and by industrial sector (based on ISIC Rev. 3) for 19 OECD countries.

Publication: OECD, *Measuring Globalisation: The Role of Multinationals in OECD Economies*, 2001 Edition. Vol. II: Services. Biennial.

Bilateral Trade (BTD): This database for industrial analysis includes detailed trade flows by manufacturing industry between a set of OECD *declaring* countries and a selection of *partner* countries and geographical regions. Data are presented in thousands of USD at current prices, and cover the period 1988-2000. The data have been derived from the OECD database *International Trade by Commodities Statistics* (ITCS – formerly *Foreign Trade Statistics* or FTS). Imports and exports are grouped according to the country of origin and the country of destination of the goods. The data have been converted from product classification schemes to an activity classification scheme based on ISIC Rev.3, that matches the classification currently used for the OECD's STAN, Input-Output tables and ANBERD databases.

Publication: OECD (2003), *Bilateral Trade Database*, 2002. Only available on diskette.

Information and communication technology (ICT)

Telecommunications: This database is produced in association with the biennial *Communications Outlook*. It provides time-series data covering all OECD countries, where available, for the period 1980-2002. It contains both telecommunication and economic indicators.

Publication: OECD (2003), *Telecommunications Database* 2003. Only available on diskette and CD-ROM.

ICT: Work is under way to develop a database on ICT supply and ICT usage statistics. Statistics on employment, value added, production, wages and salaries, number of enterprises, R&D, imports and exports for the ICT sector are being collected following the OECD ICT sector definition.

Publication: OECD (2002), *Measuring the Information Economy*, 2002. Freely available as a Web book with "clickable" access to the data used at: www.oecd.org/sti/measuring-infoeconomy.

1. Imports as a percentage of domestic demand (estimated as production minus exports plus imports). Values greater than 100 can occur when exports exceed production because of the inclusion of re-exports - products that are imported and then re-exported without any further transformation.

2. Medical, precision and optical instruments is included in Manufacturing, n.e.c. and recycling.

3. Railroad equipment and transport equipment, n.e.c. is included in Motor vehicles.

4. Aircraft and spacecraft is included in Railroad equipment and transport equipment, n.e.c.

5. Excludes intra-EU trade. European Union includes Austria, Denmark, Finland, France, Germany, Italy, Portugal, Spain, Sweden and United Kingdom.

6. Includes intra-EU trade. European Union includes Austria, Denmark, Finland, France, Germany, Italy, Portugal, Spain, Sweden and United Kingdom.

7. Calculated with the above countries.

1. Value added measured at basic prices except for United States, Japan, Korea and Iceland - estimated at factor costs

2. Business services includes renting of machinery and equipment (71); computer-related services (72); research and development (73); and other services (74) such as legal, accounting, market research and management consultancy activities, architectural, engineering and other technical activities.

3. Includes medium-high technology manufactures

4. Includes "Shipbuilding" (ISIC 351)

5. Not including "Post and telecommunications" (64)

6. OECD does not include Poland and Turkey

TABLE OF CONTENTS

| | |
|---|----------|
| Highlights | 7 |
| A.1. Investment in knowledge | 16 |
| A.2. Trends in domestic R&D expenditure | 18 |
| A.3. R&D financing and performance | 20 |
| A.4.1. Business R&D | 22 |
| A.4.2. Business R&D by industry | 24 |
| A.4.3. R&D in selected ICT industries and ict patents | 26 |
| A.4.4. Business R&D by size classes of firms | 28 |
| A.5. R&D performed by the higher education and government sectors | 30 |
| A.6.1. Biotechnology R&D, venture capital and patents | 32 |
| A.6.2. Health-related R&D | 34 |
| A.6.3. Basic research | 36 |
| A.6.4. Defence R&D in government budgets | 38 |
| A.6.5. Space R&D and innovation | 40 |
| A.6.6. Tax treatment of R&D | 42 |
| A.6.7. Nanotechnology | 44 |
| A.7. Venture capital | 46 |
| A.8.1. Human resources | 48 |
| A.8.2. Flows of university graduates | 50 |
| A.8.3. Employment of tertiary-level graduates | 52 |
| A.9.1. Human resources in science and technology | 54 |
| A.9.2. Researchers | 56 |
| A.10.1. International mobility of human capital | 58 |
| A.10.2. International mobility of PhD students | 60 |
| A.11.1. Patent applications to the European Patent Office | 62 |
| A.11.2. Patent families | 64 |
| A.12.1. R&D in non-OECD economies | 66 |
| A.12.2. Patenting in non-OECD economies | 68 |
| A.12.3. Human resources in non-OECD economies | 70 |
| A.13. Scientific publications | 72 |
| B.1. Investment in ICT equipment and software | 74 |
| B.2. Occupations and skills in the information economy | 76 |
| B.3.1. Telecommunication networks | 78 |
| B.3.2. Internet infrastructure | 80 |
| B.4.1. Internet subscribers and number of secure servers | 82 |
| B.4.2. ICT access by households | 84 |
| B.4.3. Use of the Internet by individuals | 86 |
| B.4.4. Internet access and use by enterprise size and industry | 88 |
| B.4.5. Internet and electronic commerce by size of enterprise | 90 |
| B.4.6. Internet and electronic commerce by activity of enterprise | 92 |

| | |
|--|-----|
| B.5. The price of Internet access and use | 94 |
| B.6.1. Size and growth of the ICT sector..... | 96 |
| B.6.2. Contribution of the ICT sector to employment | 98 |
| B.7. Contribution of the ICT sector to international trade..... | 100 |
| C.1. Trends in international trade and investment flows | 102 |
| C.2.1. International trade | 104 |
| C.2.2. Exposure to international trade competition by industry | 106 |
| C.2.3. Intra-firm trade in total trade..... | 108 |
| C.2.4. Import content of exports | 110 |
| C.3.1. Foreign direct investment flows..... | 112 |
| C.3.2. Cross-border mergers and acquisitions | 114 |
| C.4.1. Activity of affiliates under foreign control in manufacturing..... | 116 |
| C.4.2. Activity of affiliates under foreign control in services | 118 |
| C.4.3. The contribution of multinationals to value added and labour productivity | 120 |
| C.5.1. Internationalisation of manufacturing R&D..... | 122 |
| C.5.2. Cross-border ownership of inventions | 124 |
| C.5.3. International co-operation in science and technology..... | 126 |
| C.5.4. Technology balance of payments | 128 |
| D.1. Differences in income and productivity..... | 130 |
| D.2. Income and productivity levels in the OECD area, 1950-2002 | 132 |
| D.3. Labour productivity growth | 134 |
| D.4. Growth accounting for OECD countries..... | 136 |
| D.5. Labour productivity growth by industry..... | 138 |
| D.6. Technology- and knowledge-intensive industries..... | 140 |
| D.7. The structure of OECD economies..... | 142 |
| D.8. Services sector value-added embodied in manufactured goods..... | 145 |
| D.9.1. International trade by technological intensity | 147 |
| D.9.2. Trade in high- and medium-high-technology industries | 148 |
| D.9.3. Revealed comparative advantage by technological intensity | 150 |
| D.10. Entry, exit and survival of firms | 152 |
| Annex I. Classification of Manufacturing Industries Based on Technology..... | 155 |
| Annex II. Main OECD Databases Used | 159 |
| Statistical Annex | 163 |
