CHARACTERISTICS OF EDUCATIONAL SYSTEMS

Table X1.1a.
**Upper secondary graduation rate:
Typical graduation ages and method used to calculate graduation rates (2008)**

The typical age refers to the age of the students at the beginning of the school year; students will generally be one year older than the age indicated when they graduate at the end of the school year. The typical age is used for the gross graduation rate calculation.

Table X1.2b.

The chart displays the duration of projects for eight partner countries from 2006 to 2009. The x-axis shows months 1 through 12 for each year, with a blue bar representing the 'Financial year' and a grey bar representing the 'School year'. The length of each bar corresponds to the duration of the project for that country in that specific year.

Note: Y = Yes; N = No; SS = Some states.

1. See Annex 3 Chapter A for additional notes on completion requirements (www.oecd.org/edu/eag2010).

2. Completion requirements for ISCED 3A vary by state and territory. The information provided represents a generalisation of diverse requirements.

3. Covers general education only.

4. There is usually no final examination, though some ISCED 3A programmes can be completed this way.

5. Almost all states specify levels of Carnegie credits (*i.e.* acquired through completion of a two-semester course in specific subjects, which vary by state).

1. Data on GDP, PPPs and total public expenditure in countries in the euro zone are provided in euros.

2. GDP calculated for the fiscal year in Australia and GDP and total public expenditure calculated for the fiscal year in New Zealand.

3. For countries where GDP is not reported for the same reference period as data on educational finance, GDP is estimated as: $wt-1(GDP_{t-1}) + wt(GDP_t)$, where wt and $wt-1$ are the weights for the respective portions of the two reference periods for GDP which fall within the educational financial year. Adjustments were made in Chapter B for Australia, Canada, Japan, the United Kingdom and the United States.

4. Year of reference 2006.

5. Year of reference 2008.

6. Total public expenditure adjusted to financial year.

7. Year of reference 2005.

1. For the computation of teachers' salaries in equivalent USD shown in Indicator D3, teachers' salaries are converted from national currencies to USD using January 2008 PPPs for GDP and adjusted for inflation where necessary. Teachers' salaries in equivalent USD based on January 2008 PPPs for final consumption are shown in Table X2.3c of Annex 2.

2. Data on salaries for countries now in the euro zone are shown in euros.

General notes

Definitions

Gross domestic product (GDP) refers to the producers' value of the gross outputs of resident producers, including distributive trades and transport, less the value of purchasers' intermediate consumption plus import duties. GDP is expressed in local money (in millions). For countries which provide this information for a reference year that is different from the calendar year (such as Australia and New Zealand), adjustments are made by linearly weighting their GDP between two adjacent national reference years to match the calendar year.

The **GDP deflator** is obtained by dividing the GDP expressed at current prices by the GDP expressed at constant prices. This provides an indication of the relative price level in a country. Data are based on the year 2000.

GDP per capita is the gross domestic product (in equivalent US dollars converted using PPPs) divided by the population.

Purchasing power parity exchange rates (PPP) are the currency exchange rates that equalise the purchasing power of different currencies. This means that a given sum of money when converted into different currencies at the PPP rates will buy the same basket of goods and services in all countries. In other words, PPPs are the rates of currency conversion which eliminate the differences in price levels among countries. Thus, when expenditure on GDP for different countries is converted into a common currency by means of PPPs, it is, in effect, expressed at the same set of international prices so that comparisons between countries reflect only differences in the volume of goods and services purchased.

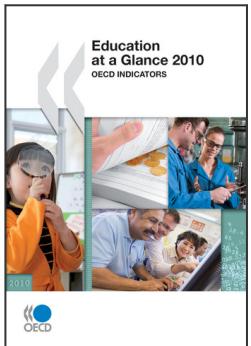

Total public expenditure as used for the calculation of the education indicators, corresponds to the non-repayable current and capital expenditure of all levels of government. Current expenditure includes final consumption expenditure (*e.g.*, compensation of employees, consumption intermediate goods and services, consumption of fixed capital, and military expenditure), property income paid, subsidies, and other current transfers paid (*e.g.*, social security, social assistance, pensions and other welfare benefits). Capital expenditure is spending to acquire and/or improve fixed capital assets, land, intangible assets, government stocks, and non-military, non-financial assets, and spending to finance net capital transfers.
